PROFESSIONAL PROFILE

C++ and Unreal Engine 5 programmer focused on gameplay systems, runtime tools and engine architecture. Experienced in developing Unreal systems designed to work in packaged builds, including MCP-based AI tool integration and runtime animation editing. Strong background in gameplay programming, C++/Blueprint architecture, async communication and real-time interactive systems.

PROFESSIONAL EXPERIENCE

Unreal Engine Programmer | MystherAI

April 2026 - Present

- Developing a runtime animation editor in Unreal Engine 5, focused on manipulating animation data and bone transforms directly in the app.
- Implemented runtime systems for editing animation frames, bone selection, transform controls and timeline-based workflows.
- Designed the system to work in packaged builds, avoiding editor-only dependencies.
- Worked on C++/Blueprint architecture to expose animation editing features in a usable runtime UI.

Unreal Engine / C++ Programmer | HechicerIA

November 2025 - April 2026

- Developed an Unreal Engine 5 system using the Model Context Protocol (MCP) to allow AI tools to interact with Unreal projects at runtime.
- Implemented communication between Unreal Engine and an external MCP server using HTTP/WebSocket workflows.
- Built tool-registration and execution systems so Unreal functions could be called dynamically from AI-driven requests.
- Adapted the system to work correctly in packaged builds, not only inside the Unreal Editor.
- Worked on C++ subsystems, runtime UI, async communication and robust integration with backend services.

Gameplay Programmer | Cremaet Studios, Valencia

October 2024 - June 2025

- Worked on Tiris, a dark top-down shooter adventure published on Steam.
- Implemented gameplay systems and mechanics in Unreal Engine 5.
- Developed and supported systems such as enemy AI, pickups, inventory and Steam integration.
- Collaborated with artists and designers to improve player experience, fix bugs and polish gameplay interactions.

Raftel Engine | Academic Project

2025

- Custom C++ game engine developed with OpenGL.
- Implemented OBJ mesh loading, dynamic lighting, shadows, HDR rendering, bloom and PBR materials.
- Built an ImGui-based editor interface for scene editing.
- Developed entity picking, basic physics and input systems.

Unreal / Unity / Android Studio Academic & Personal Projects

2022 - 2025

- Developed gameplay prototypes and technical exercises in Android Studio, Unreal Engine and Unity.
- Participated in game jams and team-based academic projects.

TECHNICAL SKILLS

- **Languages:** C++, C#, Kotlin
- **Game Engines:** Unreal Engine 5, Unity
- **Unreal:** Gameplay systems, runtime tools, animation systems, Blueprints, C++ subsystems, packaged builds
- **Tools & Technologies:** Git, Perforce, OpenGL, ImGui, HTTP/WebSocket integrations
- **Programming:** OOP, systems architecture, performance optimization, debugging

---

EDUCATION

HND in Videogames Programming
ESAT (Escuela Superior de Arte y Tecnología), Valencia, Spain (2022 – 2025)

Note: Completed 1 year of Computer Engineering at UPV before specializing in game development at ESAT.

LANGUAGES

- Spanish: Native
- Valencian: Native
- English: Advanced (C1 Cambridge Certificate)
